PROFILE

MSc Design and Digital Media student at the University of Edinburgh with a background in systems configuration at Oracle Cerner. I approach design as a research and thinking practice, grounded in user insight, cultural analysis, and iterative testing, and realised through UX, game design, and coded interactive experiences. I am looking for roles where design research and design thinking sit at the centre of the work.

PROJECTS

Breaking the Smartphone Mold

Design Research Industry Interview Cultural Analysis

University of Edinburgh Edinburgh College of Art

- Conducted a primary research interview with a senior marketing professional at CMF by Nothing, examining how CMF design decisions function as both cultural expression and commercial strategy.
- Analysed the smartphone market through frameworks on institutional isomorphism, cultural homogenisation, and brand authenticity, arguing that design convergence reduces identity expression for users.
- Brought primary and secondary sources into a structured argument about how colour, material, and finish carry cultural meaning, and how those choices either resist or reproduce market uniformity.

Playing Freedom

Critical Design Analysis Game Studies Cultural Theory

University of Edinburgh Edinburgh College of Art

- Critically analysed how Assassin's Creed: Freedom Cry translates the history of Caribbean slavery into commercial game design, examining the tension between cultural representation and entertainment readability.
- Applied design research frameworks including indexical storytelling, environmental design theory, and cultural appropriation scholarship to understand how narrative framing and spatial design shape player experience.
- Developed an argument that the game reshapes historical material to fit the demands of franchise pacing and broad audience appeal, showing how design decisions reformat culture rather than simply depict it.

CardioPal

UX Design User Research Figma Health App

University of Edinburgh Edinburgh College of Art

- Designed a 25-screen mobile app prototype for an EKG health-tracking device, targeting users of varying ages and levels of digital confidence.
- Ran a full UX research process covering user research, task analysis, iterative wireframing, and formal usability testing with two participants, consent documentation, and structured metrics.
- Achieved a 71% task completion rate and resolved friction in caregiver workflows, form labelling, and multi-step report flows through targeted iteration.
- Framed the interface as a reassurance tool rather than a data display, using calm visual hierarchy and accessible language grounded in user emotional context.

BETTR.

Speculative Design HTML CSS JavaScript Netlify

University of Edinburgh Edinburgh College of Art

- Built a speculative web experience that critiques algorithmic optimisation through the interaction itself rather than through explanatory text, live on Netlify.
- Implemented branching logic, timer-based hesitation tracking, and a user profiling system that carries input forward across four escalating stages, grounded in research on nudge theory and interface manipulation.
- Designed a complete visual system with layered transparent panels, structured typographic hierarchy, and colour states that shift progressively as the experience escalates.

FrankenTeen

Game Design Level Design Narrative Design Unity Blender Team of 3

University of Edinburgh Edinburgh College of Art

- Co-designed a top-down isometric adventure RPG reinterpreting Frankenstein as a punk coming-of-age story, structured across three acts with emotional pacing driving spatial and narrative design decisions.
- Owned Act 3 in full, covering level layout, narrative arc, the Victor encounter, dialogue trigger and progression systems, and breakable object interaction mechanics.
- Designed the guitar as a unified contextual mechanic: one input that adapts across exploration, NPC dialogue, musical performance, and confrontational combat, keeping controls minimal while reinforcing character identity.
- Conducted structured user testing sessions, categorised findings by urgency, and iterated on interaction clarity, spatial navigation, NPC visibility, and key binding communication.

Echoes of Home

Game Design Environmental Storytelling Unity Blender

University of Edinburgh Edinburgh College of Art

- Designed and built a low-poly 3D memory exploration game in Unity, using environmental design and ambient narrative to carry emotional tone in place of explicit dialogue.
- Modelled assets in Blender and implemented procedural obstacle spawning, a coin reward system, baked lighting, and asynchronous scene transitions.
- Ran think-aloud user testing sessions and iterated on interaction clarity, audio pacing, and emotional flow across scenes based on findings.

EXPERIENCE

Front of House / Food Runner

Mar 2026 – Present

Tamil Teru Restaurant Edinburgh, Scotland

- Delivered attentive service in a high-volume restaurant, managing multiple tasks simultaneously while maintaining accuracy throughout shifts.
- Worked closely with kitchen and floor teams to keep service coordinated and consistent during busy periods.

Configuration Analyst

Jun 2022 – Sep 2025

Oracle Cerner Bengaluru, India

- Configured healthcare IT systems for over 1,000 hospital clients across scheduling, registration, and patient accounting domains.
- Led CURES Regulatory implementation across 20 or more US hospital clients, covering full build and testing phases to government standards.
- Coordinated with internal project teams on timelines, status updates, and configuration verification across external client implementations.
- Recipient of the Consulting Excellence and Consulting Navigators awards for continuous improvement and innovation.

System Intern

Jan 2022 – Jun 2022

Oracle Cerner Bengaluru, India

- Supported healthcare technology infrastructure implementation and contributed to process improvement initiatives as part of a structured internship programme.

EDUCATION

MSc Design and Digital Media

Sep 2025 – Present

University of Edinburgh Edinburgh College of Art

BTech Computer Science Engineering

Jul 2018 – Jun 2022

Jain University Bengaluru, India
